PROFILE

Senior software engineer with 5+ years building financial and high-traffic systems on .NET — digital wallets, multi-tenant platforms, and banking products. Specialized in real-time transaction processing, messaging architectures, and Clean Architecture codebases that stay testable as they grow.

EXPERIENCE

Backend Engineer — Cube Holdings Limited

Oct 2024 — Present

- Designed and implemented core wallet modules end-to-end: transactions, notifications, user management, system & global management, and third-party integrations.
- Built real-time transaction processing on RabbitMQ with Redis for caching and OTP storage (automatic expiry) and Hangfire for background job scheduling.
- Integrated six external providers — G2G, Telia, Airhub, SIA Insurance, Ogero, and a payment scheduler — plus GlobeSMS and Twilio messaging and Firebase push notifications.
- Generated dynamic Excel reports with Open XML SDK and bank-grade PDF account statements with QuestPDF.
- Secured the platform with JWT authentication and authorization, and enforced Clean Architecture for a modular, testable codebase across all modules.

.NET 8 · C# · Oracle · SQL Server · Redis · RabbitMQ · Hangfire · Docker · Azure DevOps

Software Developer — Mobile Technology Tomorrow (MT2)

Sep 2022 — Sep 2024

- Developed and maintained web landing pages and portals for markets across the Gulf, Africa, and Europe on the Value Added Services team.
- Owned 20+ multi-tenant educational, gaming, and video portals — support, testing, and troubleshooting end-to-end, with 4–5 microservices behind each portal.
- Integrated operator subscription flows and shipped releases through a structured QA process, deploying and verifying on IIS web servers.

.NET · C# · MVC · HTML5 / CSS3 / JS · SQL Server · IIS · TFS

Software Developer — Allied Engineering Group (AEG)

Sep 2020 — Sep 2022

- Built features for fintech products used inside banks, including desktop applications and Windows services in C#.
- Tested, deployed, and installed web applications on IIS — including database scripts and Windows-service setup on customer banking environments.

.NET · C# · Web Forms · Telerik · SQL Server · TFS

SELECTED PROJECTS

NPS — Newsletter Preference System

Full-stack subscription platform with a passkey-protected admin dashboard, built with GDPR-style consent tracking in mind. (github.com/alimkdd/NPS)

Transaction Retry System

Intelligent retry engine for failed payments — retries transient failures, fails fast on permanent ones. (github.com/alimkdd/TransactionRetrySystem)

Fee Calculation Engine

Configuration-driven fee engine for domestic, international, withdrawal, and deposit transactions. (github.com/alimkdd/FeeCalculationEngine)

More open-source work at github.com/alimkdd.

SKILLS

Backend & Architecture: .NET 8 / .NET 10, C#, ASP.NET Core, Clean Architecture, Microservices, REST APIs, Blazor Server, EF Core

Data & Caching: SQL Server, Oracle, Redis, Query optimization, Caching strategies

Messaging & Background Jobs: RabbitMQ, Hangfire, Firebase Cloud Messaging, Twilio / SMS gateways, Real-time processing

DevOps & Delivery: Docker, Azure DevOps, CI/CD pipelines, IIS, Git / GitHub, Jira / Agile

Quality & Security: JWT authentication, WebAuthn / passkeys, FluentValidation, xUnit / Moq, Serilog, Swagger / Postman / Scalar, QuestPDF / Open XML

EDUCATION

Master 1 — Management Information Systems — Lebanese University, Beirut	2020 — 2021
B.S. — Management Information Systems — Lebanese University, Beirut	2015 — 2019
